"54" HUDSON--a Six

Here is the Answer

to that oft asked question: What will Howard E. Coffin do when he builds a 'Six'?"

The "54" HUDSON answers the question everyone in motordom has been asking for years. All know Howard E. Coffin to be America'e foremost engineer. His six famous four-cylinder cars gained a reputation

for him which led all to expect a wonderful six from him.

But sixes are not like fours, as many a designer has learned to his sorrow. Mr. Coffin realized that, and so, instead of attempting a six alone, he first secured as his associates the men who had already accomplished the most in six-cylinder designing. His men came from the leading factories of Europe and America. There are 48 in all-representing 97 leading motor car manufacturers. Combined, they know just about all that has been learned in motor car building. So the "54" HUDSON - Mr. Coffin's answer - is the composite of what the most successful builders, working together, have accomplished.

Electric Self-Cranking---Electrically Lighted

The Best Car They Know.

It is smooth and flexible-the qualities for which sixes are really built, and which inexperienced men seem unable to obtain in the sixes they build, It is powerful-speedy, beautiful, safe and comfortable. Simpliffty is a notable feature, and economy in operation is accomplished as it is in but few

six-cylinder cars. Not Just Two Cylinders Added to a "Four"

Adding two cylinders to a good four won't even make a poor six. Fours and sixes are entirely different. That is why some sixes give less than 30 per cent, increased power when their weight, and fiel and oil consumption are 50 per cent, greater than the four of same size, to say nothing of the greater first cost.

Comfort - Speed - Completeness

The cushions of the "54" HUDSON are Turkish type-12 inches deep. Backs are high, upholstery thick springs flexible and the car is so nicely balaffect' that it will take the worst reads at speed and with little discondent to passengers

On the Indianabolis Sweedway equipped carrying extra tires and four passengers. did to infles at 62 miles an hour. One year ago on the same course a \$ 00 prize was forfeited because hone of many of the best known fours and sixes similarly equipped, driven by famous drivers, were able to do one mile in 60 seconds, flying start.

A "4" Hudson, with full equipment carrying four passengers, was driven from Detroit, Mich., to South Bend, Indiana-198 miles in 5 hours and 20 minutes. The trip was made between 6:30 and 11:50 a, m., July 4, 1912. Stops were made to change a tire and take on gasoline. The roads all the way are considered below the average in quality. The average speed was in excess of 27 miles an hour without de-

ducting stops Every detail of motor car comfort is included in the "54" It is electrically self-cranking, has electric lights, speedometer, clock, top, rain vision windshield, nickel-plated transmings-21 coats paint and Variash body tinish, demonstable rims-26x412 fires. gasonne tank, with magnetic gauge on rear, tobe calls, curtains and all the appointments that go with

tleships; and Secretary Meyer points out that even though this number

The opening of the Panama Canal will in no sense double the American fleet, according to Secretary Meyer. While it will increase its efficiency by facilitating its passage from one coast to another, this condition has been fully considered in calculating the naval program. Without the canal, says Secretary Meyer, experts figure that the United States would need a fleet double that of a coun-

try whose coast line is continuous. The secretary estimates that a total of 41 battleships, with a proportional number of other fighting and auxiliary vessels, is the least that would place this country on a safe basis in its relations with other world powers. This fleet should be secured as soon as practicable, he said, and its strength should be maintained by replacing obsolete vessels with new ones by a unifrom annual program. While the navy department would welcome more torpedo boats and submarines, the secre-A. E. Larimer will report on education- tary expresses the belief that until more of the old Lattleships are replaced it is wiser to build battleships than smaller vessels.

Aeroplane equipment is entirely inadequate at the present time, accorddents enrolled in the twelve different ing to Secretary Meyer. He points out that while the United States spent only \$140,000 for this purpose last year, Japan spent \$600,000 and five European nations spent individual sums ranging from \$2,000,000 to \$6,-000,000, the latter being the expendiwith a weapon, this morning entered ture of France. progressive development of naval avi-

The application of the eight-hour law to all shipyards, says Secretary Meyer, will probably cause an increase in the appropriation necessary to build ships of a given type. As to small American navy yards, Secretary Meyer makes no definite recommendations for their abolishment, but suggests that if the American fleet is to spend part of its time on the Pacific coast after the Panama Canal opens, some of the navy yards on the eastern coast will automatically close from lack of work. As to the first-class yards he adopts the recommendation of the general board that all their biouse into the third party is rather begin the four which will include Aps channels be dredged to a depth of at indefinite as to numbers, but the com- traba, the Philippan s.
